

# HD Fiber Panels

Amphenol HD Patch Panels provide a convenient point for patching and managing large number of fiber optic cables. The modular and high density design of the panels make them ideal in high density data center applications, for use in the main distribution area and horizontal and equipment distribution areas. The patch panels provide easy access to the cable assemblies, suitable cable routing features, and bend radius protection for the fibers.

## Features and Benefits

Sturdy 16 gauge steel and aluminum construction with durable black powder coat finish

Removable doors provide increased enclosure access during installation and maintenance

Reversible brackets allow panel to be mounted on either 19" or 23" racks

Modular adapter packs or MPO cassettes can be pre-installed to reduce installation costs

Panels provide ample room for storage of fiber slack while maintaining bend radius protection

All enclosures include mounting hardware, installation instructions, and cable ties

Custom designs available
